DETAILED ACTION

1. Claims 11 and 13-16 are pending.

Response to Arguments

2. Applicant's arguments with respect to claims 11 and 13-16 have been considered but are most in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

3. Claims 11 and 13-15 rejected under 35 U.S.C. 103(a) as being unpatentable over Howell et al. (Howell), U.S. Patent No. 5,276,901 in view of <u>The SSL Protocol</u>, <u>Version 3.0</u> (SSL).

As per claims 11 and 15:

Howell substantially teaches a method comprising:

authenticating a user of the knowledge base (1:32-46, wherein the electronic library is the knowledge base);

determining the clearance level of a requested secure document (6:16-32);

determining a number of document caveats associated with the requested document (4:8-36, 52-64, wherein the object access control type and access list associated with each document represent necessary conditions for access to the document and are thus a number of document caveats);

Application/Control Number: 09/892,281

Art Unit: 2132

for each of the number of document caveats, obtaining the respective document caveat for the requested document, the respective document caveat representing a necessary condition for access to the document (fig. 4, 5:66-6:42 wherein the access control type and access lists are obtained);

determining the clearance level of the authenticated user (6:16-32);

determining a number of user caveats of the authenticated user (4:53-64, 5:23-47, wherein having access in contingent upon being on the access list and being in a group that has access which are necessities for access, thus making them user caveats);

for each of the number of user caveats, obtaining the respective user caveat representing a condition necessary for the authenticated user to have access to a document having an associated document caveat (6:6-56);

comparing the clearance level of the requested document with the clearance level of the authenticated user (6:19-23);

for all combinations of the user caveats and the document caveats, comparing the document caveat of the requested document to the user caveat of the authenticated use (fig. 4, 5:66-7:14); and

and displaying the secure document to the authenticated user in response to the clearance level of the user dominating the clearance level of the requested document and the comparison of all combinations of the user caveats to the document caveats (5:66-7:14).

Howell fails to teach authenticating a server by requiring that the server has a valid certificate of authorization. However, SSL discloses a method wherein a server is authenticated through the use of a certificate of authorization (Section 5.5, paragraphs 1-3, Section 5.6.2). It

would have been obvious, at the time of Applicant's invention to utilize SSL for the client-server communications of Howell because SSL would protect the communications from eavesdropping, tampering and forgery (SSL, pg. 1 Abstract).

As per claim 13:

Howell fails to teach a method further comprising encrypting and signing the authenticated user. However, SSL discloses a method wherein the user must have a digital signature (Section 5.5, 2nd paragraph).

It would have been obvious to one of ordinary skill in the art at the time of applicant's invention to require the user to present a digital signature because this would add an extra layer of security and prevent someone from stealing the actual user's identity.

As per claim 14:

SSL further discloses a method wherein authenticating a user comprises requiring the user to have a valid certificate of authorization (Section 5.5, paragraphs 1-3, Section 5.6.6). It would have been obvious, at the time of Applicant's invention to utilize SSL for the client-server communications of Howell because SSL would protect the communications from eavesdropping, tampering and forgery (SSL, pg. 1 Abstract).

4. Claims 16 rejected under 35 U.S.C. 103(a) as being unpatentable over Howell (5,276,901) in view of SSL as applied to claims 11 and 15 above, and further in view of Erickson, U.S. Patent No. 5,765,152.

As per claim 16:

Howell and SSL fail to teach a method further comprising multiple authentication of a user. However, Erickson discloses a method comprising multiple authentication of a user prior

Art Unit: 2132

to comparing the clearance level of the requested document with the clearance level of the authenticated user (24:4551).

It would have been obvious to one of ordinary skill in the art at the time of applicant's invention to require the user to go through multiple authentication in order to ensure the user's identity and prevent identity theft.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kristin D. Sandoval whose telephone number is 571-272-7958. The examiner can normally be reached on Monday - Friday, 8:00-5:30.

Application/Control Number: 09/892,281
